

Spring into cleaning with helpful tips.

Many people will regard this past winter as one of the most harsh in decades. No matter a scale ranking or hand vote upon severity, it is certain that most families and pets stayed inside this winter. Staying indoors was further complicated if family members suffering from viruses and flus shared the same rooms. Of course, family pets stayed inside more this past winter. Animal hair and oil accumulates in their favorite resting areas regardless a designated dog bed or a sofa shared by the family. Also remember certain breeds of pets have very light weight hair, and this hair can float several feet before landing on carpets, upholstery, or curtains. In most cases area rugs and foyer rugs are now covered with visible stains and saturated with tiny, hard sand and soil particles. The days are getting longer and parties and other events are now popping up on the calendar. Here are some tips from **Yeatts Inc.** to help you have clean, odor free fabrics ready for you and your guests to enjoy during Spring events. A good place to start fabric cleaning in frequently used rooms is to clean all draperies or curtains. With wood or even plastic blinds, dust and animal hair can easily be seen. With so many colored curtains and draperies available, dust and animal hair is less visible. However, it's there. Within the last decade, manufacturers have made it possible to wash most curtains using a regular household washing machine. Thus, this is a simple and inexpensive step in cleaning all fabrics in a room. Don't forget small pillows, comforters, or blankets placed on sofas or upholstered furniture that are shared by everyone including pets. Wash these items as well in a washing machine if possible or replace. ***Washing all the curtains and draperies in a room is just the first step!*** The next step is to have your fabric upholstery professionally cleaned by **Yeatts Inc.** Dust, animal hair and oil, food stains, and soil accumulates and gets embedded into upholstery fiber. Even if it is only a cushion or two that needs cleaning, just drop off the cushions at **Yeatts Rug Plant**. Always, as we stress, protect upholstery fabrics after cleaning. It's a great idea to have our super strong deodorizer **Fabrimint** available in between cleanings. You can mist **Fabrimint** onto any fabrics including dog beds, pillows, curtains and more. Finally the last fabric to clean in a room before hosting Spring events is the carpet or area rugs. Grit, sand, animal hair and oil, mud, food and drink stains, pet stains, soil, and bacteria are removed using the most superior machinery and cleaning solutions available. Make sure you visit the coupons page on our website for a special on upholstery cleaning only available this Spring.

New equipment and upgrades.

Yeatts Inc. has always made an effort to yield better results in the various repair services we offer. A new tool to create precise patches in damaged carpet and rugs was made in-house recently. We have already tested this new tool on rug repair orders. It was designed to make our repair work less noticeable, which is our main goal. The large platform at **Yeatts Rug Plant**, used to repair or make rugs, has been improved significantly. This allows our craftspeople to expedite orders without diminishing the quality of their work. We now use a stronger thread to stitch separated areas in rugs. This thread is made to manufacture upholstery fabric. For minor separation of fringing or serging along rugs or separated areas in braided rugs, hand repair using this thread is the best option.
